

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) An internet receiving arrangement for receiving information data stored in information servers connected to the internet, the arrangement having address retrieval means which, when activation information is present, are adapted to retrieve collective address information from an address server operatively connected to the address retrieval means of the internet, the collective address information identifying those information servers from which information data processable by the internet receiving arrangement can be retrieved, and having information retrieval means for retrieving the processable information data from an information server identified by the retrieved collective address information, and having quality test means for testing the information data retrieved and received by

the information retrieval means and for supplying the activation information to the address retrieval means when the quality of the received information data is below a quality threshold value ~~or when no information data processable by the internet receiving arrangement are received from the information server.~~

2. (Previously Presented) An internet receiving arrangement as claimed in claim 1, in which timer means have been provided which at periodically occurring activation instants supply the activation information to the address retrieval means in order to retrieve the collective address information.

3. (Previously Presented) An internet receiving arrangement as claimed in claim 1, in which entry means for the manual entry of the address information of a further information server have been provided from which information data processable by the internet receiving arrangement can be retrieved.

4. (Previously Presented) An internet receiving arrangement as claimed in claim 1, in which the address retrieval means, when the

activation information is present, are adapted to retrieve transcoding address information from the address server, which transcoding address information identifies a transcoding server which is adapted to transcode information data stored in an information server but not processable by the internet receiving arrangement into information data processable by the internet receiving arrangement, and in which the information retrieval means are adapted to retrieve the information data processable by the internet receiving arrangement from the transcoding server identified by the transcoding address information.

5. (Previously Presented) An internet receiving arrangement as claimed in claim 1, in which noise generator means have been provided, which noise generator means are adapted to supply noise information to information data processing means of the internet receiving arrangement during the time that the activation information is present.

6. (Previously Presented) An internet receiving arrangement as claimed in claim 1, in which the address retrieval means, when

activation information is present, are adapted to retrieve at least two items of collective address information from at least two address servers connected to the internet.

7. (Previously Presented) An internet receiving arrangement as claimed in claim 1, which internet receiving arrangement is formed by an internet television set adapted to receive and process audio/video data in the form of information data.

8. (Previously Presented) The internet receiving arrangement as claimed in claim 1, wherein the information data is audio data.

9. (Currently Amended) The internet receiving arrangement as claimed in claim 1, wherein the quality is a measure of ~~is~~-audio quality data.

10. (Previously Presented) The internet receiving arrangement as claimed in claim 1, wherein the information servers are internet radio stations.

11. (Currently Amended) An internet receiving arrangement for receiving information data from information servers that are connected to the internet comprising:

an address retrieval device to selectively retrieve collective address information from an address server, the address retrieval device being operatively connected to the address server only through the internet, where an activation information device is employed to determine if address information is retrieved;

an information retrieval device configured to retrieve information data from the information servers that are identified by the retrieved collective address information, wherein the collective address information identifies those information servers from which information data is to be retrieved; and

a quality test device arranged to test the information data retrieved and received by the information retrieval device and for supplying the activation information to the address retrieval device if the quality of the received information data is below a quality threshold value ~~or when no information data is considered processable by the internet receiving arrangement.~~

12. (Previously Presented) The internet receiving arrangement as defined in claim 11, wherein a timer is provided to supply the activation information to the address retrieval device in order to retrieve the collective address information.

13. (Previously Presented) The internet receiving arrangement defined in claim 11, wherein an entry device is provided for entry of the address information of a further information server from information data can be retrieved.

14. (Previously Presented) The internet receiving arrangement defined in claim 11, wherein the address retrieval device is adapted to retrieve transcoding address information from the address server, which transcoding address information identifies a transcoding server adapted to transcode information data from an information server but not processable by the internet receiving arrangement, and in which the information retrieval device is adapted to retrieve the information data processable by the internet receiving arrangement from the transcoding server identified by the transcoding address information.

15. (Previously Presented) The internet receiving arrangement defined in claim 11, wherein the noise generator is adapted to supply noise information to information data processing means of the internet receiving arrangement during the time that the activation information is present.

16. (Previously Presented) The internet receiving arrangement defined in claim 11, wherein the address retrieval device is adapted to retrieve at least two items of collective address information from at least two address servers connected to the internet.

17. (Previously Presented) The internet receiving arrangement defined in claim 11, wherein the internet receiving arrangement includes an internet television adapted to receive and process audio/video data in the form of information data.

18. (Previously Presented) The internet receiving arrangement defined in claim 11, wherein the information data is audio data.

19. (Currently Amended) The internet receiving arrangement defined in claim 11, wherein the quality is a measure of ~~is~~ audio quality data.

20. (Previously Presented) The internet receiving arrangement defined in claim 11, wherein the information servers are internet radio stations.
